

Sleeping With The Fish

The Manta Resort is on an island. It is just off the coast of Tanzania. The resort has opened a new Swedish-designed underwater bedroom. The room floats above a coral reef in a protected spot.

The daytime view is of a coral shoal and schools of fish. Bat fish and trumpet fish are the most common. At night, underwater spotlights attract and illuminate the shy night fish such as squid and octopus.

The three-level floating room has a sky deck on the roof. There are incredible views of the stars at night. The underwater room is 250 meters from the shore.
