

Too Cold For A Polar Bear?!?!

back

A polar bear lives in a zoo in Chicago. Chicago is warm for a polar bear. Even in winter, it is not very cold there. The polar bear has changed to live in this place. It still has fat to stay warm, but the fat is not very thick. In its natural home, the fat would be much thicker.

When the weather gets very cold, the polar bear feels cold. The zoo has a special warm place for the bear. The bear likes to stay inside when it is freezing outside.

The zoo says the polar bear is 12 years old. It does not like very cold weather. The zoo workers also say that people are not used to this cold either. It is very cold in Chicago this week, with strong winds.

It is funny to think that a polar bear wants to stay warm inside. Usually, polar bears like the cold, but this polar bear is different.
